Summary

I am a researcher with expertise in multiple disciplines, including mathematics, computational science, oceanography, and finance. I have experience with running and diagnosing ocean and climate models, developing biogeochemistry models, parameter optimisation, and analysing large datasets. To support my scientific enquiries, I have developed several open-source scientific software packages. I have an excellent publication record and presented my work at local and international conferences. I am also passionate about education despite limited opportunities for teaching.

In last few years, I have been investigating the ocean's response to global warming. In the future, I hope to leverage my skills in oceanography, climate modelling, and data analysis to develop innovative solutions and strategies that mitigate the impacts of climate change.
